6" WALLET \$12.95 CLOO2

Kinds of Sounds

Sounds can be classed as either noisy or musical. A *noise* is produced by a vibrating object, such as a rattling window, that sends out irregular vibrations at irregular intervals. *Musical* is made by a vibrating body that sends out regular vibrations at regular intervals, such as a piano played by a skilled musician. Some other kinds of sound include the sounds made by people and animals, and stereophonic sound and ultrasound.
